Computer Engineer from the University of Granada (2022 – 2026). I have shipped two native iOS and Android apps to the App Store and Google Play, together with their backend, the production server and an AI model trained on real data. Looking for a software, AI or mobile developer role, remote or in Granada.

PROFESSIONAL EXPERIENCE

Software Developer

Dec 2025 – present

GeoNotary S.L. · Granada, Spain

Started helping out, then an internship and continued work in a three-person team, from code to production.

GeoNotary — app that certifies a user's location with legal validity — App Store · Google Play

- Built the Android app from scratch (Kotlin, Jetpack Compose) and released it on Google Play.
- Improved the stability of the iOS app (Swift, SwiftUI) and added protection against fake locations.

WhatsPericialApp — app that certifies WhatsApp chats as evidence — App Store · Google Play

- Ported the app from iOS to Android, including real-time remote assistance, and released it on Google Play.
- Improved backend performance and security (PHP, Node.js, MySQL), including Stripe payments.

Production, infrastructure and AI

- Run the production Linux server: deployments, certificates and backups.
- Developed an AI model trained on real usage data from GeoNotary users.
- Diagnosed a months-long production failure from real data whose root cause was not the one assumed.

PROJECTS

- **Pasture biomass from a single photo (Kaggle)**: estimating live and dead pasture biomass from a single photo with only 357 training images. We compared four approaches (vision foundation models, knowledge distillation, convolutional networks and classical descriptors with Random Forest), fixed data leakage in validation and wrote it up as a scientific paper. Code
- **Compiler with Flex and Bison**: a compiler in C with LALR(1) parsing, intermediate code and translation to C, tested on GitHub Actions. Code
- **Hands-controlled interactive museum**: 3D web kiosks with Leap Motion and three.js, plus an Android app. Video

TECHNICAL SKILLS

Core skills	Swift (SwiftUI), Kotlin (Jetpack Compose), PHP, MySQL, Linux, Git
Also proficient in	Python, Java, C++, PostgreSQL, web (JavaScript, Node.js, React, HTML/CSS)
Full stack	dunkurunku.github.io

EDUCATION

Bachelor's degree in Computer Engineering · University of Granada — 2022 – 2026

Specialisation in Computing and Intelligent Systems.

LANGUAGES

Spanish: native · **English**: upper-intermediate (B2), working towards C1
